Abstract: numerical change in energy will be explained through new algebra.

Introduction: we will try to give a new explanation of numerical change in energy etc.

Main body: Suppose static energy of body a is 90 calories. Now

We are taking 7 numbers. -3, -2, -1, 0, 1, 2, 3

Here only 0 is true. And 2 is greater false and -2 is lesser false. All others are false.

Now suppose we want to make the energy 100 calories. $100 = 2(\text{greater false})$

$100 = 2 * 0 = 0$ etc.

In this way we can achieve lesser false also.

Suppose we want 78 calories

$78 = -2$

$78 = -2 * 0 = 0$

Or, $78 = -1$. here 0 is true. -1, -2, -3 are less, lesser, least and +1, +2, +3 are great, greater, greatest falses respectively

Conclusion:

In this way we can change energy by taking -3, -2, -1, 0, 1, 2, 3 etc as digits. Or

We can make numerical change in this way.
